

Workshop 10.5a: Logistic regression

Murray Logan

September 5, 2016

Table of contents

1 Logistic regression	1
2 Worked Examples	5

1. Logistic regression

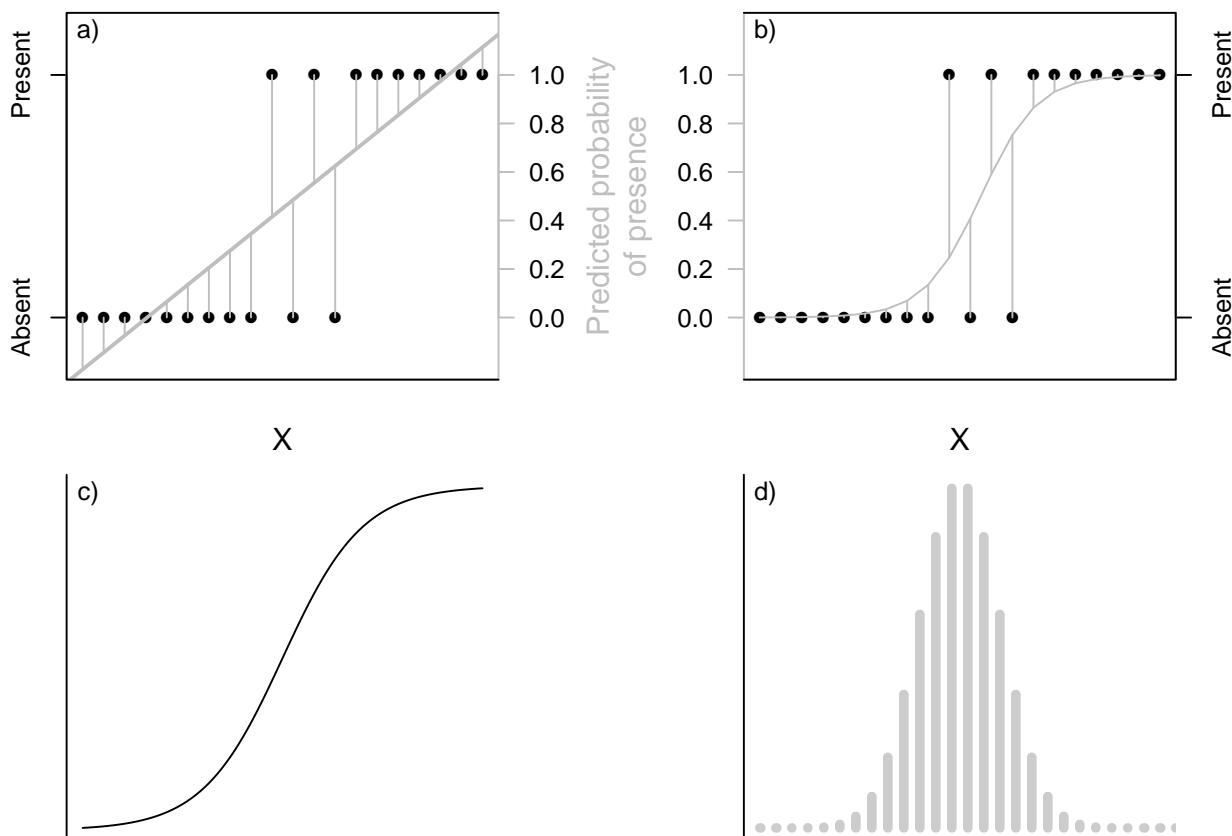

1.1. Logistic regression

1.1.1. Binary data

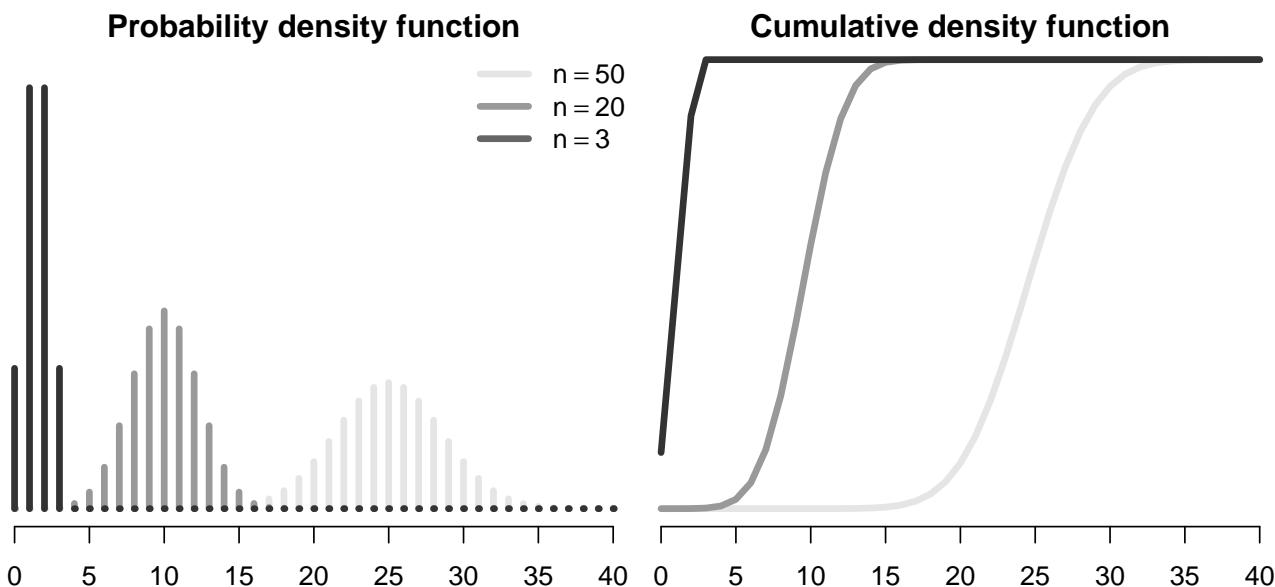

$$\text{Link: } \log\left(\frac{\pi}{1-\pi}\right)$$

Transform scale of linear predictor $(-\infty, \infty)$ into that of the response (0,1)

1.2. Logistic regression

1.3. Logistic regression

$$E(Y) = \binom{n}{x} p^x (1-p)^{n-x}$$

Spread assumed to be equal to mean. ($\phi = 1$)

1.4. Dispersion

1.4.1. Over-dispersion

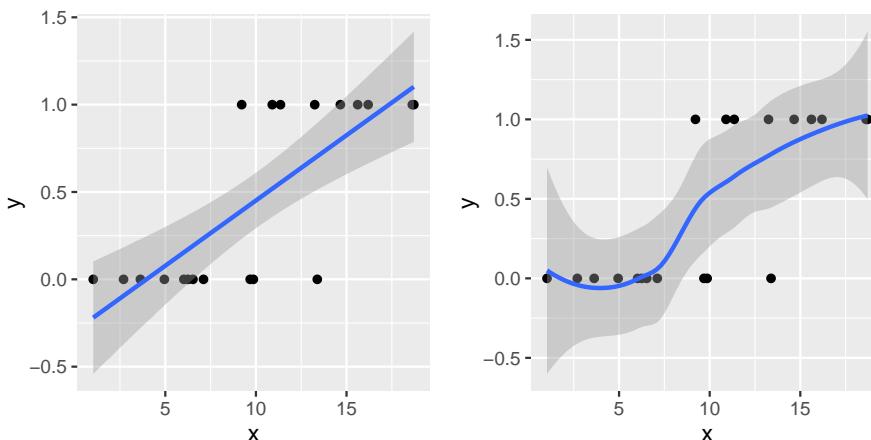

Sample more varied than expected from its mean

- variability due to other unmeasured influences
 - quasi- model
- due to more zeros than expected
 - zero-inflated model

1.5. Logistic regression

Example data

	y	x
1	0	1.024733
2	0	2.696719
3	0	3.626263
4	0	4.948643
5	0	6.024718
6	0	6.254113

1.6. Logistic regression

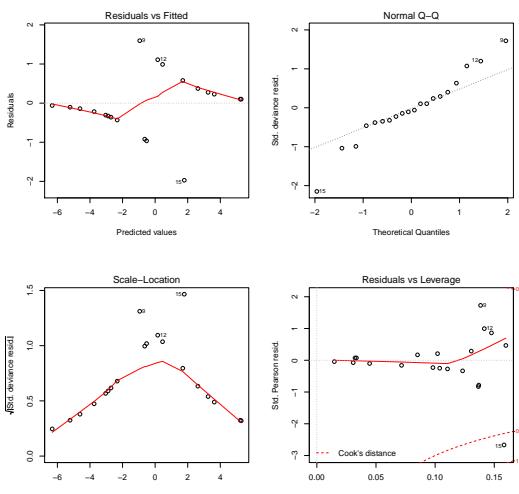

- Fit model

```
> dat.glmL <- glm(y ~ x, data = dat, family = "binomial")
```

1.7. Logistic regression

- Explore residuals

```
> par(mfrow=c(2,2))
> plot(dat.glmL)
```

1.8. Logistic regression

- Explore goodness of fit
- Pearson's χ^2 residuals

```
> dat.resid <- sum(resid(dat.glmL, type = "pearson")^2)
> 1 - pchisq(dat.resid, dat.glmL$df.resid)
```

[1] 0.8571451

- Deviance (G^2)

Townsville address: PMB No 3,
Townsville MC, Qld 4810
Tel: (07) 4753 4444
Fax: (07) 4772 5852

Darwin address: PO Box No 41775,
Casuarina NT 0811
Tel: (08) 8920 9240
Fax: (08) 8920 9222

Perth address: The UWA Oceans Institute (M096)
35 Stirling Highway, Crawley WA 6009
Tel: (08) 6369 4000
Fax: (08) 6488 4585

```
> 1-pchisq(dat.glmL$deviance, dat.glmL$df.resid)
```

[1] 0.8647024

1.9. Logistic regression

- Explore model parameters

Slope parameter is on log odds-ratio scale

```
> summary(dat.glmL)
```

Call:

```
glm(formula = y ~ x, family = "binomial", data = dat)
```

Deviance Residuals:

Min	1Q	Median	3Q	Max
-1.97157	-0.33665	-0.08191	0.30035	1.59628

Coefficients:

	Estimate	Std. Error	z value	Pr(> z)
(Intercept)	-6.9899	3.1599	-2.212	0.0270 *
x	0.6559	0.2936	2.234	0.0255 *

Signif. codes: 0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

(Dispersion parameter for binomial family taken to be 1)

Null deviance: 27.526 on 19 degrees of freedom

Residual deviance: 11.651 on 18 degrees of freedom

AIC: 15.651

Number of Fisher Scoring iterations: 6

1.10. Logistic regression

- Quasi R^2

$$\text{quasi}R^2 = 1 - \left(\frac{\text{deviance}}{\text{null deviance}} \right)$$

```
> 1-(dat.glmL$deviance/dat.glmL>null)
```

[1] 0.5767057

1.11. Logistic regression

- LD50

$$LD50 = -\frac{\text{intercept}}{\text{slope}}$$

```
> -dat.glmL$coef[1]/dat.glmL$coef[2]
```

(Intercept)

10.65781

1.12. Logistic regression

- summary figure
