

# Workshop 7.6b: Factorial ANOVA (Bayesian)

Murray Logan  
*July 19, 2017*

---

## Table of contents

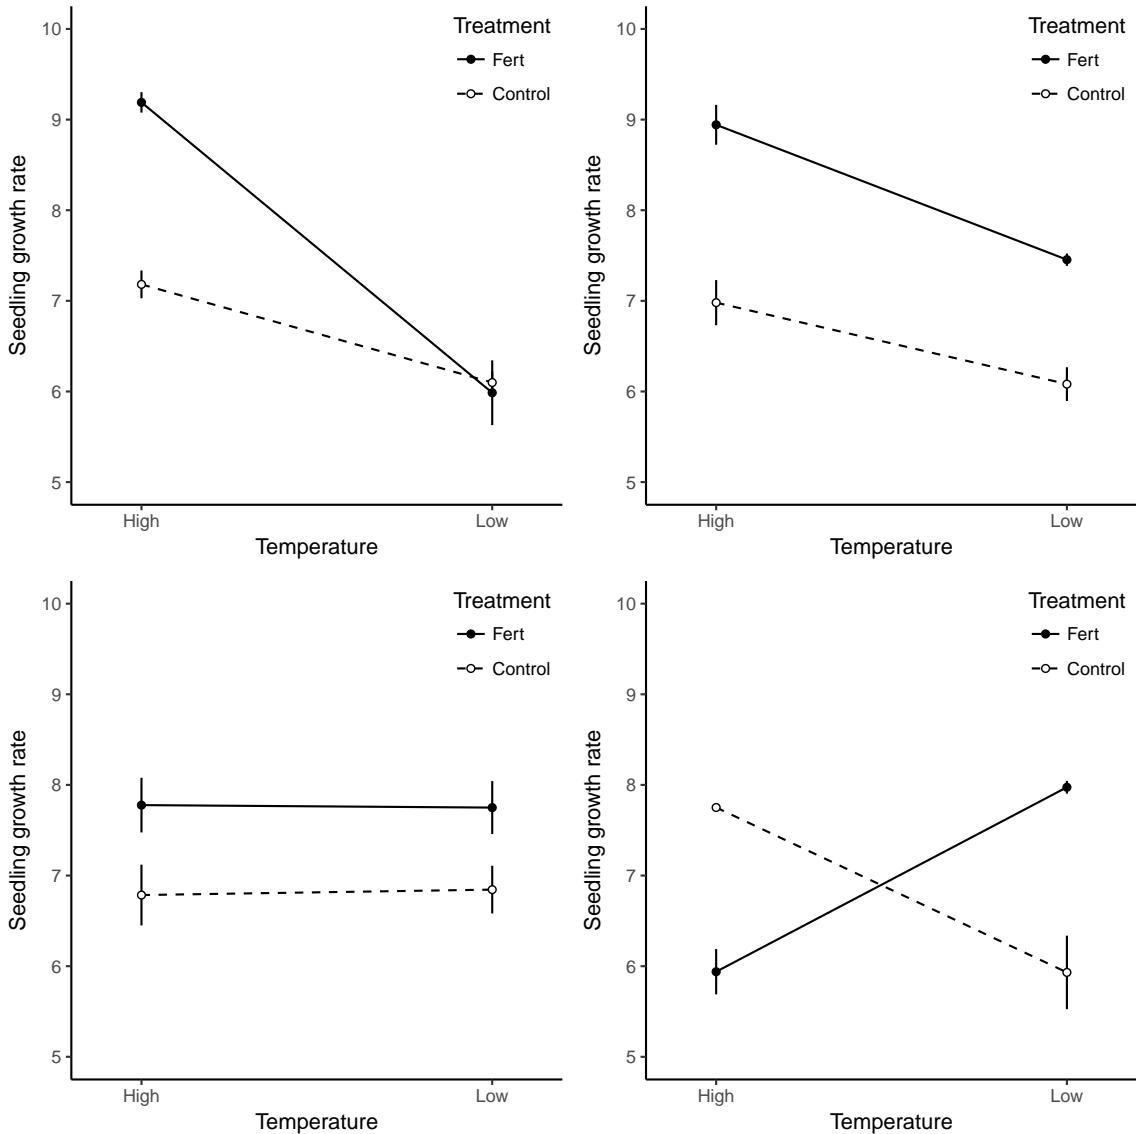

|   |                 |   |
|---|-----------------|---|
| 1 | Background      | 1 |
| 2 | Worked examples | 5 |

## 1. Background

---

### 1.1. *Factorial ANOVA*

## 1.2. Factorial ANOVA

## 1.3. The linear model

Two-factor

|           | Low N | Medium N | High N |
|-----------|-------|----------|--------|
| Low temp. | XXX   | XXX      | XXX    |
| High temp | XXX   | XXX      | XXX    |

$$y_{ijk} = \mu + \alpha_i + \beta_j + \alpha_i\beta_j + \varepsilon_{ijk}$$

- $\alpha_i$  is the effect of the  $i_{th}$  temperature
- $\beta_j$  is the effect of the  $j_{th}$  nitrogen level
- $\alpha_i\beta_j$  is the effect of the  $ij_{th}$  interaction.

## 1.4. The linear model

Two-factor

|           | Low N                           | Medium N                                                 | High N                                                   |
|-----------|---------------------------------|----------------------------------------------------------|----------------------------------------------------------|
| Low temp. | XXX ( $\eta = \mu$ )            | XXX ( $\eta = \mu - \beta_2$ )                           | XXX ( $\eta = \mu - \beta_3$ )                           |
| High temp | XXX ( $\eta = \mu - \alpha_2$ ) | XXX ( $\eta = \mu - \alpha_2 - \beta_2 - \gamma_{2,2}$ ) | XXX ( $\eta = \mu - \alpha_2 - \beta_3 - \gamma_{2,3}$ ) |

$$y_{ijk} \sim N(\eta_{ijk}, \sigma^2)$$

$$\eta_{ijk} = \mu + \sum_{j=2}^J \alpha_j \mathbf{T}_j + \sum_{k=2}^K \beta_k \mathbf{N}_k$$

$$+ \sum_{j=2, k=2}^{J \times K} \gamma_{jk} \mathbf{T} \mathbf{N}_{jk}$$

## 1.5. The linear model

Two-factor

|           | Low N | Medium N | High N |
|-----------|-------|----------|--------|
| Low temp. | XXX   | XXX      | XXX    |
| High temp | XXX   | XXX      | XXX    |

Temp    Nitrogen

|      |        |
|------|--------|
| Low  | Low    |
| Low  | Low    |
| Low  | Low    |
| Low  | Medium |
| Low  | Medium |
| Low  | Medium |
| Low  | High   |
| Low  | High   |
| Low  | High   |
| High | Low    |
| High | Low    |
| High | Low    |
| High | Medium |
| High | Medium |
| High | Medium |
| High | High   |
| High | High   |
| High | High   |

$$y_i = \beta_{0i} + \beta_{1i} + \beta_{2i} + \beta_{3i} + \beta_{4i} + \beta_{5i} + \beta_{6i} + \varepsilon_i$$

## 1.6. The linear model

Two-factor

| T    | N      | NA | (Intercept) | THigh | NMedium | NHigh | THigh:NMedium | THigh:NHigh |
|------|--------|----|-------------|-------|---------|-------|---------------|-------------|
| Low  | Low    | NA | 1           | 0     | 0       | 0     | 0             | 0           |
| Low  | Low    | NA | 1           | 0     | 0       | 0     | 0             | 0           |
| Low  | Low    | NA | 1           | 0     | 0       | 0     | 0             | 0           |
| Low  | Medium | NA | 1           | 0     | 1       | 0     | 0             | 0           |
| Low  | Medium | NA | 1           | 0     | 1       | 0     | 0             | 0           |
| Low  | Medium | NA | 1           | 0     | 1       | 0     | 0             | 0           |
| Low  | High   | NA | 1           | 0     | 0       | 1     | 0             | 0           |
| Low  | High   | NA | 1           | 0     | 0       | 1     | 0             | 0           |
| Low  | High   | NA | 1           | 0     | 0       | 1     | 0             | 0           |
| High | Low    | NA | 1           | 1     | 0       | 0     | 0             | 0           |
| High | Low    | NA | 1           | 1     | 0       | 0     | 0             | 0           |
| High | Low    | NA | 1           | 1     | 0       | 0     | 0             | 0           |
| High | Medium | NA | 1           | 1     | 1       | 0     | 1             | 0           |
| High | Medium | NA | 1           | 1     | 1       | 0     | 1             | 0           |
| High | Medium | NA | 1           | 1     | 1       | 0     | 1             | 0           |
| High | High   | NA | 1           | 1     | 0       | 1     | 0             | 1           |
| High | High   | NA | 1           | 1     | 0       | 1     | 0             | 1           |
| High | High   | NA | 1           | 1     | 0       | 1     | 0             | 1           |

## 1.7. (Bayesian) linear model

Two-factor

|           | Low N                             | Medium N                                              | High N                                            |
|-----------|-----------------------------------|-------------------------------------------------------|---------------------------------------------------|
| Low temp. | Low ( $\eta = \alpha$ )           | Low ( $\eta = \alpha - \beta_3$ )                     | ( $\eta = \alpha - \beta_4$ )                     |
| High temp | Low ( $\eta = \alpha - \beta_2$ ) | Low ( $\eta = \alpha - \beta_2 - \beta_3 - \beta_5$ ) | ( $\eta = \alpha - \beta_2 - \beta_4 - \beta_6$ ) |

$$y_{ij} \sim N(\eta_{ij}, \sigma^2) \quad \eta_{ij} = \alpha + \beta X$$

$$\begin{aligned}\alpha &\sim N(0, 1000) \\ \beta_j &\sim N(0, 1000) \\ \sigma^2 &\sim \text{cauchy}(0, 4)\end{aligned}$$

## 1.8. Factorial ANOVA

### 1.8.1. Assumptions

- Normality
- Homogeneity of variance
- Independence
- Considerations for **Balance**

### 1.8.2. MCMC related

- Chain mixing and convergence diagnostics

## 2. Worked examples

---

### 2.1. Worked examples

Error in file(file, "rt"): cannot open the connection

Error in head(quinn): object 'quinn' not found

### 2.2. Worked Examples

Question: what effects do season and density have on barnacle recruitment

Linear model:

$$Recruits_{ijk} = \mu + \alpha_i + \beta_j + \alpha_i\beta_j + \varepsilon_{ijk} \quad \varepsilon \sim \mathcal{N}(0, \sigma^2)$$
